

## HIGH SECURITY SHREDDERS

### What this actually means.

This range of high security shredders are suitable for shredding “classified” and “Top Secret” documents and all of the range is equipped with the “Energy Smart” system for zero power consumption in Stand-by mode, continuous duty motors and a sturdy steel gear and metal chain driving system.

The special cutting systems of this high security range (0.8 x 9.5 mm Level 5) and (0.8 x 5 mm Level 6) meets the latest shredding standards for Top Secret documents NSA/CSA specifications 02-01 issued by the National Security agency of the US Government. This high security shredder can shred a simple A4 sheet into 16.500 micro chips which becomes completely unreadable even if a special electronic optical microscope is used.

Should you not require such strict levels of security, Frama can also supply more standard level straight or cross cut shredders for med-large usage.
