Frama introduces comprehensive range of high security shredders

Frama, best known for their Digital Touch Screen Franking Systems has just introduced a comprehensive range of 52 shredder models, ranging from security level 2 to 6. The range has been selected to provide businesses with secure shredding solutions which reduce the risks of confidential data being used fraudulently.

The range has shredder models to suit all businesses and budgets. The high security range is especially important to any business that is obliged to adhere to the strictest data protection regulations.

Clever features also make these shredders an ideal investment, for instance models fitted with the 'Energy Smart' feature use zero power consumption in standby mode meaning you only pay for what you use.

The range is also designed with 24hr continuous motors meaning that the Frama Shredders will not suffer overheating which can often be a problem with many shredders.

Frama promotes the high security range as **'once shredded, never recovered'** meaning your sensitive data or confidential documentation is completely untraceable with a Frama level 5 or 6 shredder.

END.
